

Recognised Certification Labels for the Green Button

(04/2024)

As part of the meta-label approach, the Green Button sets requirements for production processes at selected supply chain levels. Companies demonstrate compliance through recognised certification labels. Alongside the requirements for corporate due diligence processes, they are the basis for a product to be labeled with the Green Button. An independent assessment (benchmarking process) is currently taking place to evaluate which certification labels are recognised for complying with the requirements of Green Button 2.0. The certification labels recognised for the Green Button 1.0 are provisionally recognised for the Green Button 2.0 until July 31, 2024. These certification labels are marked with the white box **GB1.0**.

The green box **GB2.0** indicates which certification labels are already recognised for the Green Button 2.0.

The recognised certification labels listed under “Fibres/Materials” are not recognised across the board, but only for certain approved fibres and materials. More detailed information on which fibres and materials are allowed and which recognised certification labels can be applied to which fibres can be found in this [document](#). This overview of certification labels that are recognised by the Green Button must be read in conjunction with the linked document.

This document is continuously updated. The latest version can be found on our [website](#).

	Manufacturing	Wet Processes	Fibres /Materials <small>Please consult this document for approved fibres and materials.</small>
 Blue Angel	GB1.0	GB1.0	
 Bluesign Product		GB1.0 GB2.0	GB2.0 For Down and where permitted virgin polyester
 Cotton Made in Africa (CmiA) (HIP und Mass Balance)			GB2.0 For cotton
 Cradle to Cradle (Silver Status or above)		GB1.0	
 Fairtrade Cotton			GB2.0 For cotton
 Fairtrade Textile Production	GB1.0 GB2.0	GB1.0
